GRID

Grid – "Completing mobile forms has never been faster."

Meet grid: the fastest way to capture information on a mobile device. Canvas has upped the ante by creating a user interface that guarantees rapid data collection.

When we talk to subscribers, the conversation always comes back to the end-user and goes something like this:
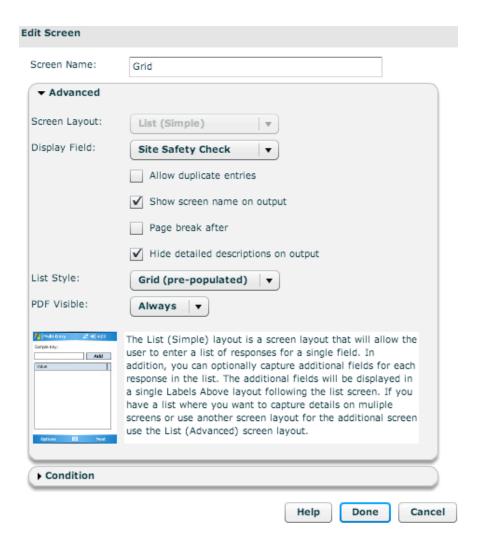

"What can Canvas do to provide you with an even greater return on investment?"

"Make it faster. Our end-users will use the system if it's faster than what they're currently using and has an intuitive interface. They're happy because they're able to complete their work more quickly. We're happy because they are more productive."

Using grid is as simple as selecting it from a drop-down menu in the app builder.

Apps where we see grid used most:
- Audits – Safety, Regulatory
- Inspections – Ladder, Vehicle, Eye Wash, Bar Code Scan, Equipment
- Walk-throughs – Factories, Manufacturing Plants
- Inventory Management, Receiving/Shipping

Edit Screen

Screen Name: Grid

▼ **Advanced**

Screen Layout: List (Simple) ▼

Display Field: **Site Safety Check** ▼

☐ Allow duplicate entries

☑ Show screen name on output

☐ Page break after

☑ Hide detailed descriptions on output

List Style: **Grid (pre-populated)** ▼

PDF Visible: **Always** ▼

The List (Simple) layout is a screen layout that will allow the user to enter a list of responses for a single field. In addition, you can optionally capture additional fields for each response in the list. The additional fields will be displayed in a single Labels Above layout following the list screen. If you have a list where you want to capture details on muliple screens or use another screen layout for the additional screen use the List (Advanced) screen layout.
